

Startup Infrastructure, Incubation & Ecosystem

Knowledge base for Startup AI Agent — India/Karnataka focus

1. What infrastructure means for a startup

Startup infrastructure is more than office space. It can include incubators, accelerators, coworking facilities, laboratories, testing facilities, Centres of Excellence, Technology Business Incubators, Common Instrumentation Facilities, mentorship networks, investor networks and market-access programs.

2. Incubators

Incubators help early-stage startups develop an idea or prototype. Depending on the program, support can include workspace, mentoring, technical facilities, networking, business guidance and access to investors or funding programs.

An entrepreneur should compare incubators based on sector fit, stage, facilities, mentors, program duration, equity requirements if any, fees, funding opportunities and location.

3. Accelerators

Accelerators are generally structured programs designed to help startups move faster toward product-market fit, revenue, investment readiness or expansion. Programs vary, so entrepreneurs should verify the current program terms.

4. Karnataka ecosystem

The 2026 Karnataka Startup Ecosystem report describes Karnataka as having a mature startup ecosystem and identifies support including incentives, Centres of Excellence, Technology Business Incubators, Common Instrumentation Facilities, incubation support, mentor and investor networks, coworking spaces and a dedicated Startup Cell.

Karnataka's nodal ecosystem agency is described in the 2026 report as the Karnataka Innovation and Technology Society (KITS), under the Department of Electronics, Information Technology, Biotechnology and Science & Technology.

5. How to choose infrastructure

For a hardware startup, prioritise labs, prototyping, testing and manufacturing access. For a software startup, prioritise mentors, cloud/technology support, customers, hiring networks and investor access. For biotech or deep-tech startups, specialised laboratories, regulatory guidance and domain mentors may be critical.

The chatbot should ask: location, sector, startup stage, required facility, budget and preferred program type before recommending infrastructure.
